Operator

10+20=30

operands

❑ Operators:

Operators are symbols that tell the compiler to perform specific operations, such as mathematical, logical, or bitwise operations, on data values. They act on variables or values to produce a result.

Example: In the expression $a + b$, the $+$ symbol is an operator that adds the values of a and b .

❑ Operands:

Operands are the values or variables on which the operator acts. In an expression, operands are the data items that operators manipulate.

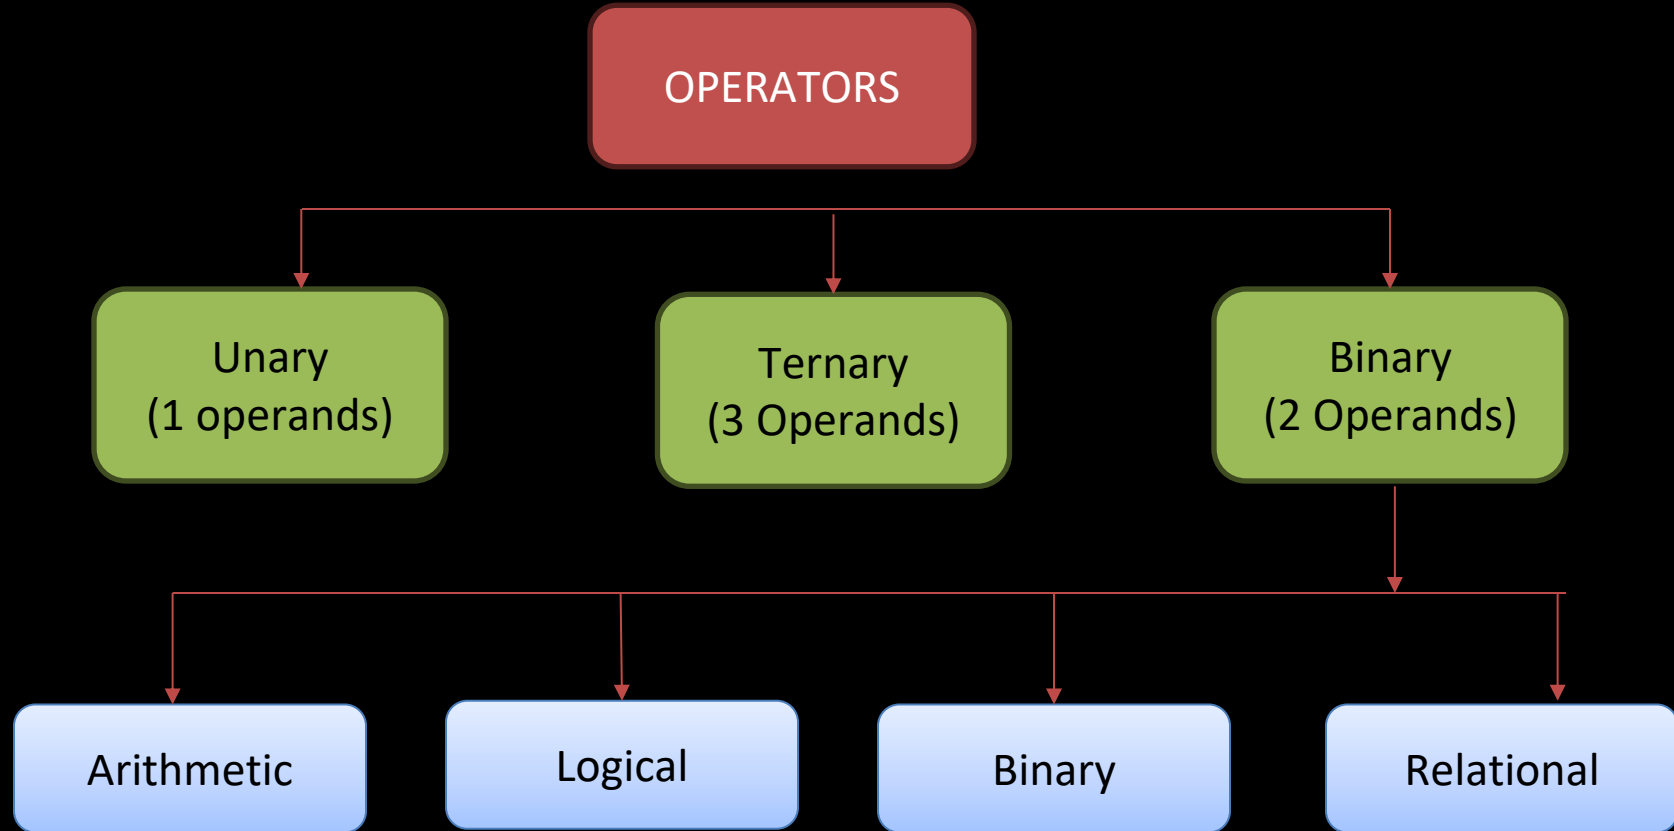

Example: In the expression $a + b$, a and b are operands, while $+$ is the operator acting on these operands.

□ Expression Example with Operators and Operands:

Consider $c = a + b * 2$;

- Operators: $=$, $+$, $*$
- Operands: a , b , 2 , and c

❑ Types Of Operators:

Unary
operator

Binary
Operator

Ternary
Operator

| Operators | Type |
|----------------------|---------------------|
| ++,-- | Unary Operator |
| +, -, *, /, % | Arithmetic Operator |
| <, <=, >, >=, ==, != | Relational operator |
| &&, , ! | Logical Operator |
| &, , <<, >>, -, ^ | Bitwise Operator |
| =, +=, -=, *=, %= | Assignment Operator |
| ?: | |

Assignment Operator(=)

```
#include<stdio.h>
```

```
void main(){
```

```
    int a=10;
```

```
    a= 20;
```

```
}
```

20

~~10~~

$a=b+c$; valid

$b+c=a$; invalid

10=a

X

10=20

X

Lvalue=Rvalue

LHS

Variable
e
a=10
(valid)

Literal
10=a
(invalid)

Expression
a+b=10(invalid)

a= ; (RHS missing before ;)
=10;(Missing variable (LHS))
a=10(;is Missing)

❖ Arithmetic Operators(+,-,*,%,/)

Precedence order:

| Operator | Description | Precedence Level | Associativity |
|----------|-----------------------------------|------------------|---------------|
| * / % | Multiplication, Division, Modulus | Higher | Left to Right |
| + - | Addition, Subtraction | Lower | Left to Right |

% Modulus Operator

$a \% b$: Remainder when a is Divided by b

$$14 \% 5 = 4$$

$$12 \% 2 = 0$$

$$2 \% 5 = 2$$

$$3 \% 7 = 3$$

**Note : Both Operand Must be int data type
otherwise error ex: $1.2 \% 2$ == check karo**

Note 1: Both Operand Must be int data type otherwise error ex: $1.2\%2$ ===check karo

Note 2: Sign of result of % Operator is same as 1st Operand

Ex: $-15\%7 = -1$;

$15\%-7 = 1$;

$$a=1+3*5$$

$$1+15=16$$

Example 1: Multiplication, Division, Modulus (*, /, % - Left to Right Associativity)

```
int result = 20 / 5 * 2 %  
3;
```

Steps of Evaluation (Left to Right):

1.Division: $20 / 5 = 4$

2.Multiplication: $4 * 2 = 8$

3.Modulus: $8 \% 3 = 2$

Answer:

result = 2

Behaviors of Operator => Operands

$5/2=2$ => both operands are Integer type

$5.0/2=2.5$ => float,int=>float

$5/2.0=2.5$ => int,float=>float

$5.0/2.0=2.5$ => float ,float=>float

Use of operator:

153

Print last digit= $153\%10=3$;

Print last two digit= $153\%100=53$;

153

Print 2nd last digit= $(153/10)\%10=5$;
